Data Sheets and Operating Instructions
Model AL-T350.4 Output Transformer

This model AL-T350.4 high frequency output transformer was manufactured to meet the following basic specifications.

- **Primary Volts:** 25 V rms.
- **Secondary Volts:** 300 V rms.
- **Output Power:** 350 watts
- **Frequency Range:** 250K Hz to 800K Hz

Additional characteristics of the transformer are:

- **Primary Inductance:** 30 uH
- **Secondary Inductance:** 5.8 mH
- **Leakage Inductance:** 0.2 uH (measured at primary side)
- **Max. Overshoot Voltage:** 120% of rated output
- **Dimensions:** 6" X 5" X 4"
- **Weight:** 1 lb

When operating this output transformer, a secure earth ground connection must be made to the cabinet of the transformer. Mishandling of high voltage transformers can lead to accidental death. Thus, this transformer should only be operated by qualified personnel with electronic knowledge.

The operating frequency range of the above output transformer needs to be strictly confined within the specified frequency range of 250K Hz to 800K Hz. The provided strip-line cable is for connection between the primary of this transformer and the output of the power amplifier which drives it.

When operating this output transformer, it is strongly recommended that the amplitude be increased slowly from zero volts while monitoring the output voltage with an oscilloscope. The output voltage must not exceed 120% of rated maximum output voltage. Over-voltage can damage the transformer.
